To Whom It May Concern,
PLEASE OPPOSE HR 4026!!! In my opinion, it is absurd to limit the content of privately purchased satellite radio broadcasts. Regular radio stations are threatened by the success of satellite radio traffic and weather broadcasts and instead of competing by bettering their own programs, they are attacking those who are doing a better job than themselves. Lawmakers... please spend your time working on issues that are of real concern to the public, and not where and how we get our traffic and weather information. The purpose of any traffic and weather broadcast is to get information to listeners as quickly and easily as possible. If consumers, like myself, feel like getting this information from satellite radio, WHICH WE DO, instead of other radio stations then that is our choice. Isn't free competition among service providers the very foundation of the American economy? Those lobbying for HR 4026 are trying to cheat myself and MILLIONS of other listeners out of what we are PAYING FOR and WANT TO HEAR! Again, please oppose HR 4026 on my behalf and that of millions of other devoted, happy listeners. Thank you.
Sincerely,
Nathan Fischer
